

Project Initialization and Planning Phase

Date	1 October 2026
Team ID	6ab501466f290be8a6b4f5d3
Project Title	ComicCraft – AI Comic Story Creator
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform comic creation using generative AI, making it faster and easier for anyone to turn a story idea into a finished comic. It tackles the time and skill needed to write, illustrate and lay out a comic. Key features include AI story generation, panel image generation and PDF export.

Project Overview	
Objective	To build an AI-powered application that turns a simple story idea into a complete illustrated comic using Gemini models, without needing any drawing skills.
Scope	The project covers story and panel script generation, panel image generation, automatic page layout and PDF export through a Streamlit web interface.
Problem Statement	
Description	Creating a comic needs storytelling, illustration and layout skills and a lot of time, which stops students, teachers and content creators from turning their ideas into comics.
Impact	Solving this will save time, let non-artists express their stories visually, and make comic creation easy for learning, teaching and sharing.
Proposed Solution	
Approach	Using Gemini text and image models to generate the story and panels from a user prompt, then arranging the panels automatically and exporting the finished comic as a PDF.
Key Features	- AI story and panel script generation from a single prompt. - Panel image generation with genre and art style selection. - Automatic comic page layout with captions. - One-click PDF export of the finished comic.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard laptop or PC (CPU only); AI processing is done by the Gemini API in the cloud
Memory	RAM specifications	8 GB

Storage	Disk space for data, models, and logs	At least 1 GB free for the code and generated comics
Software		
Frameworks	Python frameworks	Streamlit
Libraries	Additional libraries	google-genai, Pillow, FPDF2, python-dotenv
Development Environment	IDE	VS Code (or any Python IDE)
Data		
Data	Source, size, format	No dataset needed. Story text and images are generated by Gemini at run time. Input: text prompt. Output: PNG images and a PDF.
