

**No. of Functional Features Included in the Solution**

|                      |                                     |
|----------------------|-------------------------------------|
| <b>Date</b>          | 1 October 2026                      |
| <b>Team ID</b>       | 6ab501466f290be8a6b4f5d3            |
| <b>Project Name</b>  | ComicCraft – AI Comic Story Creator |
| <b>Maximum Marks</b> | 5 Marks                             |

**Functional Features Overview:**

This document lists all the functional features included in the project solution. Each feature is described with its purpose, implementation status, and contribution to the overall solution.

| S.No | Feature Name           | Feature Description                                                           | Module / Component                | Status (Done / In Progress / Pending) | Marks Contribution |
|------|------------------------|-------------------------------------------------------------------------------|-----------------------------------|---------------------------------------|--------------------|
| 1    | Web Interface          | Simple page where the user enters a story idea and chooses a genre.           | Streamlit app                     |                                       |                    |
| 2    | Story Generation       | Creates a complete comic story script split into panels from the user's idea. | Story module (Gemini text model)  |                                       |                    |
| 3    | Panel Image Generation | Creates a picture for each comic panel from the panel script.                 | Image module (Gemini image model) |                                       |                    |
| 4    | Art Style Selection    | Lets the user choose an art style such as cartoon or manga.                   | Streamlit app, Image module       |                                       |                    |
| 5    | Panel Regeneration     | Lets the user regenerate a panel image they are not happy with.               | Image module                      |                                       |                    |
| 6    | Comic Page Layout      | Arranges the panels and captions on a comic page.                             | Layout module (Pillow)            |                                       |                    |
| 7    | PDF Export             | Lets the user download the finished comic as a PDF.                           | Export module (FPDF2)             |                                       |                    |
| 8    | Error Handling         | Shows a clear message and allows a retry if story or image generation fails.  | All modules                       |                                       |                    |

**Feature Summary:**

| Metric                             | Count / Value |
|------------------------------------|---------------|
| Total Features Planned             | 8             |
| Total Features Implemented         |               |
| Core / Must-Have Features          | 5             |
| Additional / Nice-to-Have Features | 3             |
| Features Tested & Verified         |               |

**Feature Category Breakdown:**

| S.No | Category                  | Features in Category | Example Features                                                           |
|------|---------------------------|----------------------|----------------------------------------------------------------------------|
| 1    | User Interface (UI)       | 2                    | Web interface, art style selection                                         |
| 2    | Backend / Logic           | 4                    | Comic page layout, PDF export, panel regeneration, error handling          |
| 3    | Database / Storage        | 0                    | None (session state and temporary files are used)                          |
| 4    | API / Integration         | 2                    | Story generation and panel image generation with the Gemini API            |
| 5    | Security / Authentication | 0                    | None needed; the API key is kept in a .env file and there is no user login |
