Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	
9	Test files and test results	
10	Demo video or walkthrough (if required)	

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

comic-craft/ src/ - Source code files (the comiccraft package) tests/ - Test files build/ - Build output .env.example - Example environment configuration (Gemini API key) .gitignore - Files excluded from the repository pyproject.toml - Project settings and dependencies README.md - Setup and run instructions comiccraft-home-desktop.png, comiccraft-home-mobile.png - Screenshots of the home page
--

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	
Login Credentials (Demo)	Not required (the app has no login)
Platform / Hosting Provider	
Repository Link	
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

Python 3, an internet connection and a Google Gemini API key.

Step 1: Clone the repository: `git clone <repository link>`

Step 2: Create and activate a virtual environment: `python -m venv .venv`, then
`.venv\Scripts\activate`

Step 3: Install the dependencies: `pip install -e .`

Step 4: Copy `.env.example` to `.env` and add your Gemini API key.

Step 5: Start the application: `uvicorn comiccraft.main:app --reload`

Step 6: Open the browser at `http://127.0.0.1:8000`, enter a story idea and generate the comic.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Needs an internet connection and a valid Gemini API key.	Check the connection and the key in the <code>.env</code> file.
2	Image generation can be slow or may stop when the API usage limit is reached.	Wait a little and try again.
